archaeology of the iroquois selected readings and research sources

Archaeological research is a long-term and expensive process. It requires a multidisciplinary approach, involving experts from various fields such as anthropology, geology, and zoology. The process of collecting and analyzing data is time-consuming and requires a significant amount of resources.

Archaeologists use a variety of methods to reconstruct the past, including excavation, dating, and analysis of artifacts and remains. They also study the natural environment, such as soil and water, to understand the impact of human activities on the landscape.

Archaeology of the Iroquois is a fascinating subject that has been studied for centuries. The Iroquois were a group of Native American tribes who lived in the northeastern part of North America. They were known for their sophisticated society, complex social organization, and advanced technology.

In the past, a series of reports on coal resources of selected counties in Indiana was published as part of the Special Coal Resources Study. The reports included coal maps showing elevation of the Hymera Coal Member (Dugger Formation, Pennsylvanian). The elevation maps were based on coal-test records, mine-map and coring results, and other available data.
